

The After Fire Wipe for First Responders

De-Wipe®

THE FACTS:

CANCER

is the leading cause of death
for Fire-fighters

Human Skin is

400%

more absorbent with every
5° rise in temperature

Fire-fighters are

3x

more likely to develop
cancer than anyone else

✓ The Solution...

De-Wipe - scientifically formulated and scientifically proven to help remove the risk of carcinogens and bacteria thanks to the added ingredient, a proactive compound that defends against hydrocarbons such as soot and dirt with ease.

The After Fire Wipe for First Responders

www.dewipe.com

A simple solution to fire-fighter and first responder safety, welfare and hygiene on scene

The recognition of carcinogens remaining on personal protective equipment (PPE) has resulted in a structured cleaning approach for potentially contaminated kit in UK Fire and Rescue Services but what about the person wearing this PPE?

Global studies have demonstrated that Fire-fighters are up to three times more likely than the general population to develop cancer before age 75. This figure rises to five times where there is continuous exposure through a failure to properly clean off contaminants.

De-Wipe is an 'after the fire' wipe for use by first responders. De-Wipe has been designed and tested to provide immediate and long-lasting protection from hazardous contaminants for fire-fighters and first responders, to address the risks associated with carcinogens whilst also avoiding potentially skin damaging decontamination materials.

Careful consideration, testing and development have

resulted in the De-Wipe, a solution that is scientifically formulated and scientifically proven to help remove and reduce carcinogens and bacteria through its key ingredient, a proactive compound that defends the skin against hydrocarbons, soot and dirt with ease.

Put simply, De-Wipe draws out impurities and cleans without drying out the skin.

The after-fire decontamination wipe will help reduce the risk and dirt from the wrist and hands, face, ears, jaw and areas around the neck and throat. Additionally, they can also be used to wipe down any other contaminated areas after an event.

De-Wipe is designed, developed and delivered in the UK and come in a variety of sizes. They are available as individual wipes or multi packs. De-Wipe is 100% biodegradable so you can be clean and green.
